EDUCATION

Washington University in St. Louis

Bachelor of Science in Computer Science + Business

- Minor in Human-Computer Interaction

St. Louis, MO

Aug. 2023 – May 2027

EXPERIENCE

Software Engineer Intern, Autonomous Vehicles

NVIDIA Corporation

May 2026 – August 2026

Santa Clara, CA

- Built and shipped a React and FastAPI AI agent platform automating **build and release pipelines** for 1,400 machine learning engineers across 3 regions.
- Trained and deployed a **Gradient Boosting Machine Learning** model on historical metadata to estimate code review pipeline times with P50-P75 quantile accuracy

Software Engineering Lead

WashU Racing Formula SAE

Sep. 2023 – Present

St. Louis, MO

- Created full-stack web application deploying **Vue.js** and **Python** to visualize live sensor telemetry, using **WebSockets** streaming to achieve data pipeline efficiency improvements of over 95%
- Facilitated creation of automotive wiring harness using **CAN** data framework, increasing system uptime by 2.5x
- Implemented serverless backend using **FastAPI**, **Redis**, and **Vercel**, increasing RF sensor data transfer by 99%

Software Test Engineer Intern

The Boeing Company

May 2025 – Aug. 2025

St. Louis, MO

- Spearheaded internal AI product engineering utilizing proprietary models to conduct UI/UX testing via **Model Context Protocol** using **TypeScript**, allowing for secure closed-loop automated testing with 99.9% uptime
- Conducted quality testing in **C#** for military customers for 4 major F/A-18 software releases serving 10,000 users

Founder

Fabric

Sep. 2023 – Feb. 2025

Nashville, TN

- Managed team of 8 to define and implement product strategy for social networking app emphasizing growth hacking, market research, and using **Agile** methods to receive \$20,000 in custom grant funding from Google, Amazon, and Brex
- Led system design of customer-facing mobile app for community of 200 users utilizing **React Native** and **Expo**

PROJECTS

Meta x 8VC Hackathon Winner | *React, Express.js, Firebase*

- Built a full-stack recruiter outreach application using **React** and **Express.js**, utilizing **Llama AI** Models for smart recommendations and **PostgreSQL** for persistent storage and managing user profiles
- Led implementation of **RESTful API** and integration with **Hunter API** reducing time to contact by 70%

WashU Racing Live Telemetry | *Vue.js, FastAPI, Arduino C, Python, Redis*

- Built motorsports telemetry dashboard using **WebSockets** and **RF Radio** transmitters to reduce data analysis time from 3 hours to 0.25 seconds, enabling real-time data visualization and failure analysis with 12x improvement
- Designed system architecture for embedded **Arduino** systems handling 600 data points/minute for 80 users
- Received a near-perfect score in industry-standard design competition, winning over 100 other international teams

Mock Operating System | *C++, CMake*

- Developed a simulated file system in **C++** allowing secure access with memory management
- Enabled dynamic file display and efficient type management, integrating software design patterns such as Abstract Factory, Proxy, and Visitor for scalability and maintainability

TECHNICAL SKILLS

Languages: Python, Arduino C, C++, SQL (Postgres), JavaScript, TypeScript, Swift

Frameworks: React, Node.js, Flask, Bun, Express.js SwiftUI, Vue.JS, React Native, FastAPI, Jupyter, PyTest

Developer Tools: Linux, Bazel, Docker, Git, AWS, Google Cloud Platform, Azure DevOps
